

KRIEGHOFF QUADRO

THE QUADRO – KRIEGHOFF'S MOST VERSATILE DRILLING YET

A classic configuration: The double rifle drilling by Krieghoff

The trim, compact lines of the Quadro action, which is made from high-strength Chrome Molybdaen steel, are borrowed from Krieghoff's popular Classic double rifle. A Purdey-style extension between the barrels serves to withstand lateral bending forces. Elegant fences reinforce the action and enhance the overall look of this fine drilling.

The Quadro features a point-of-impact adjustment, which is integrated into the front sight ramp. This allows re-regulation of the barrels without ever having to resolder or reblue them.

The double rifle-drilling configuration comes in all common calibers up to 9.3x74R and 20 gauge shotgun barrel with 3" (76) chamber.

An available single trigger option may be most desirable if the Quadro is being used strictly as a double rifle drilling.

The new combi-cocking device

Krieghoff engineers have improved the already highly popular and reliable combi-cocking device, which has set new standards for safety, reliability and practical use in recent years. The new Duplex Cocking Lever design (patent pending) allows for opening and re-cocking the drilling with great ease providing a speed advantage when it counts.

THE QUADRO – KRIEGHOFF'S MOST VERSATILE DRILLING YET

**The 'Quadro-TS' configuration.
The maximum in versatility for a drilling.**

Besides the pure double rifle drilling configuration, the Quadro 12 gauge or 20 gauge conventional drilling with double shotgun and rifle barrel comes in a thermo-stable (TS) configuration, and provides many possibilities beyond the normal drilling's use. By adding an EL-65 insert barrel in a smaller caliber, the Quadro becomes a Bock Drilling. Add the new Krieghoff ESL insert barrel available in larger calibers up to 9.3x74R and the gun again becomes a double rifle drilling. Even an All-Rifle Drilling in two large and one small caliber is possible by inserting an ESL in the left and an EL-65 in the right shotgun barrel.

No matter which combination, the Quadro thermo-stable drilling barrel with full-length rifle insert barrels can be easily adjusted for grouping when necessary.

The ESL insert barrel, available in calibers from 7mm up to 9.3x74R, is fitted to the left shotgun barrel. This allows shooting both rifle barrels in rapid succession, making full use of the double triggers, without the need to recock the gun.

Inserting and removing the factory fitted and sighted-in ESL is quick and easy. The special ESL extractor supplied does not only locate the insert, but lifts the cartridge reliably and eases reloading.

Both the 12 and 20 gauge shotgun barrels of the Quadro are suitable for steel shot.
